拯救我们的世界

气候变化

什么是气候变化和1.5摄氏度？

当二氧化碳、温室气体和空气污染物在大气层中聚集时，就会发生全球暖化。接着，它们会吸收从地球表面反射过来的阳光和太阳辐射，使地球变得暖化。全球暖化源于自然因素和人为因素。但是，人类活动是导致全球暖化的最大因素。

SAVE THE WORLD

CLIMATE CHANGE

What is Climate Change & What is 1.5C?

Global warming takes place when carbon dioxide, greenhouse gases, and air pollutants collect in the atmosphere. Then, they absorb sunlight and solar radiation that is bounced off the earth's surface, warming the plane. There are both natural and human causes of global warming. But, human activity contributes the most to global warming.
